

The **Food Insecurity Experience Scale**: the new tool to measure food access. Merits and challenges in monitoring SDG-2

Carlo Cafiero

Voices of the Hungry Project Manager

FAO Statistics Division

Outline

- The context: food security in the transition from the MDGs to the SDGs
- What is the FIES
- Successes and challenges ahead

A history of the “food problem”: from widespread **hunger** to **food security for all**

- 1945 – 1974
 - Rebuild the world food economy
 - Main focus: increase production
- 1974 – 2015
 - Tensions on food markets, first food price spike (1974)
 - Shifting focus: from food supply to food access
 - Second food price spike (2007/2008)
- 2015 – 2030
 - Increased concerns for sustainability and nutrition

From the MDGs to the SDGs

MDGs:

- *“To address the problems of **extreme poverty** in its many dimensions – income poverty, hunger, disease, lack of adequate shelter, and exclusion, while promoting gender equality, education, and environmental sustainability”* (UN Millennium Project, 2005)

SDGs:

- Universal agenda for **People, Planet, Prosperity, Peace, Partnership**
 - *“Leave no one behind”*
 - *“Every country is a developing country”* (D. Nabarro)
 - *“The agenda is one and indivisible”*

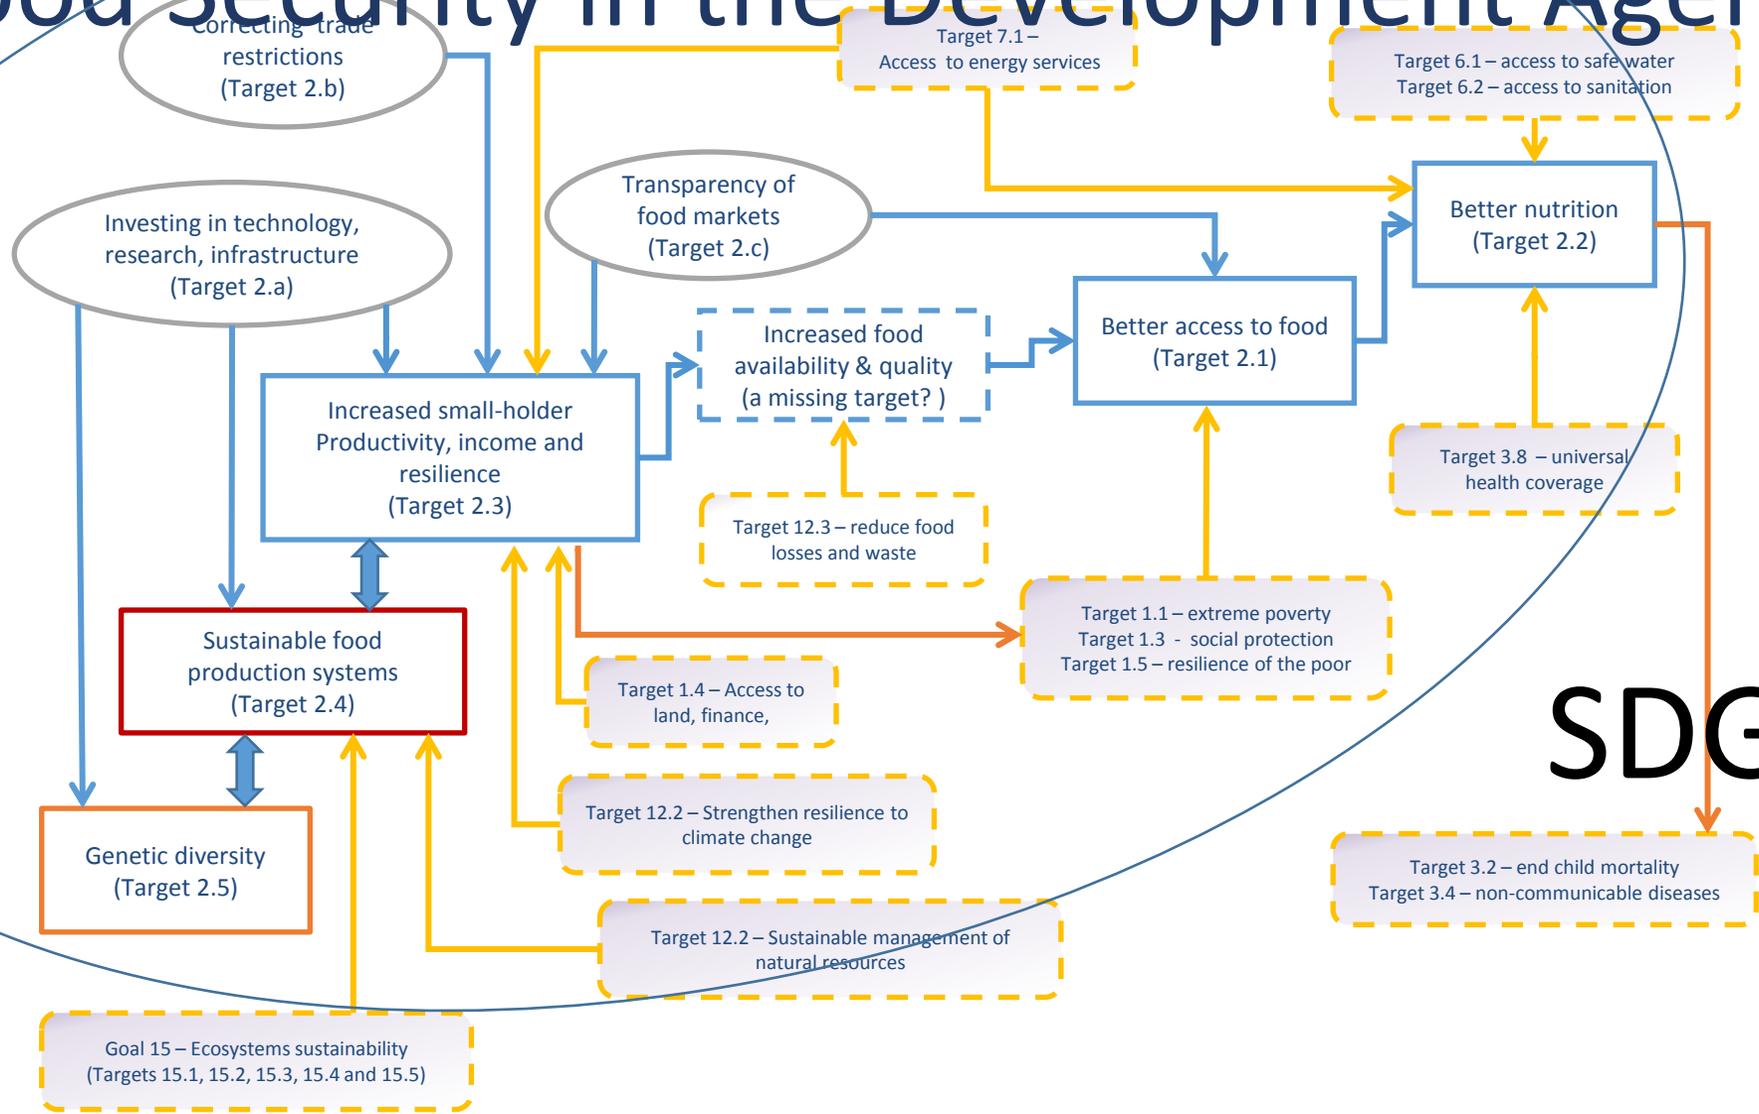

Food Security in the Development Agenda

- **MDG 1: Eradicate extreme poverty and hunger**
 - Target 1C: Halve, between 1990 and 2015, the proportion of people who suffer from hunger
 - Indicator 1.8 Prevalence of underweight children under-five years of age
 - Indicator 1.9 Proportion of population below minimum level of dietary energy consumption
- **SDG 2: End hunger, achieve food security and improved nutrition and promote sustainable agriculture**
 - Target 2.1: By 2030, end hunger and **ensure access by all people**, in particular the poor and people in vulnerable situations, including infants, to safe, nutritious and sufficient food all year round
 - Indicator 2.1.1 Prevalence of undernourishment
 - Indicator 2.1.2 Prevalence of moderate or severe food insecurity in the population, based on the Food Insecurity Experience Scale (FIES)

The SDG 2 target is a key element in the development agenda for better nutrition... while ensuring sustainability

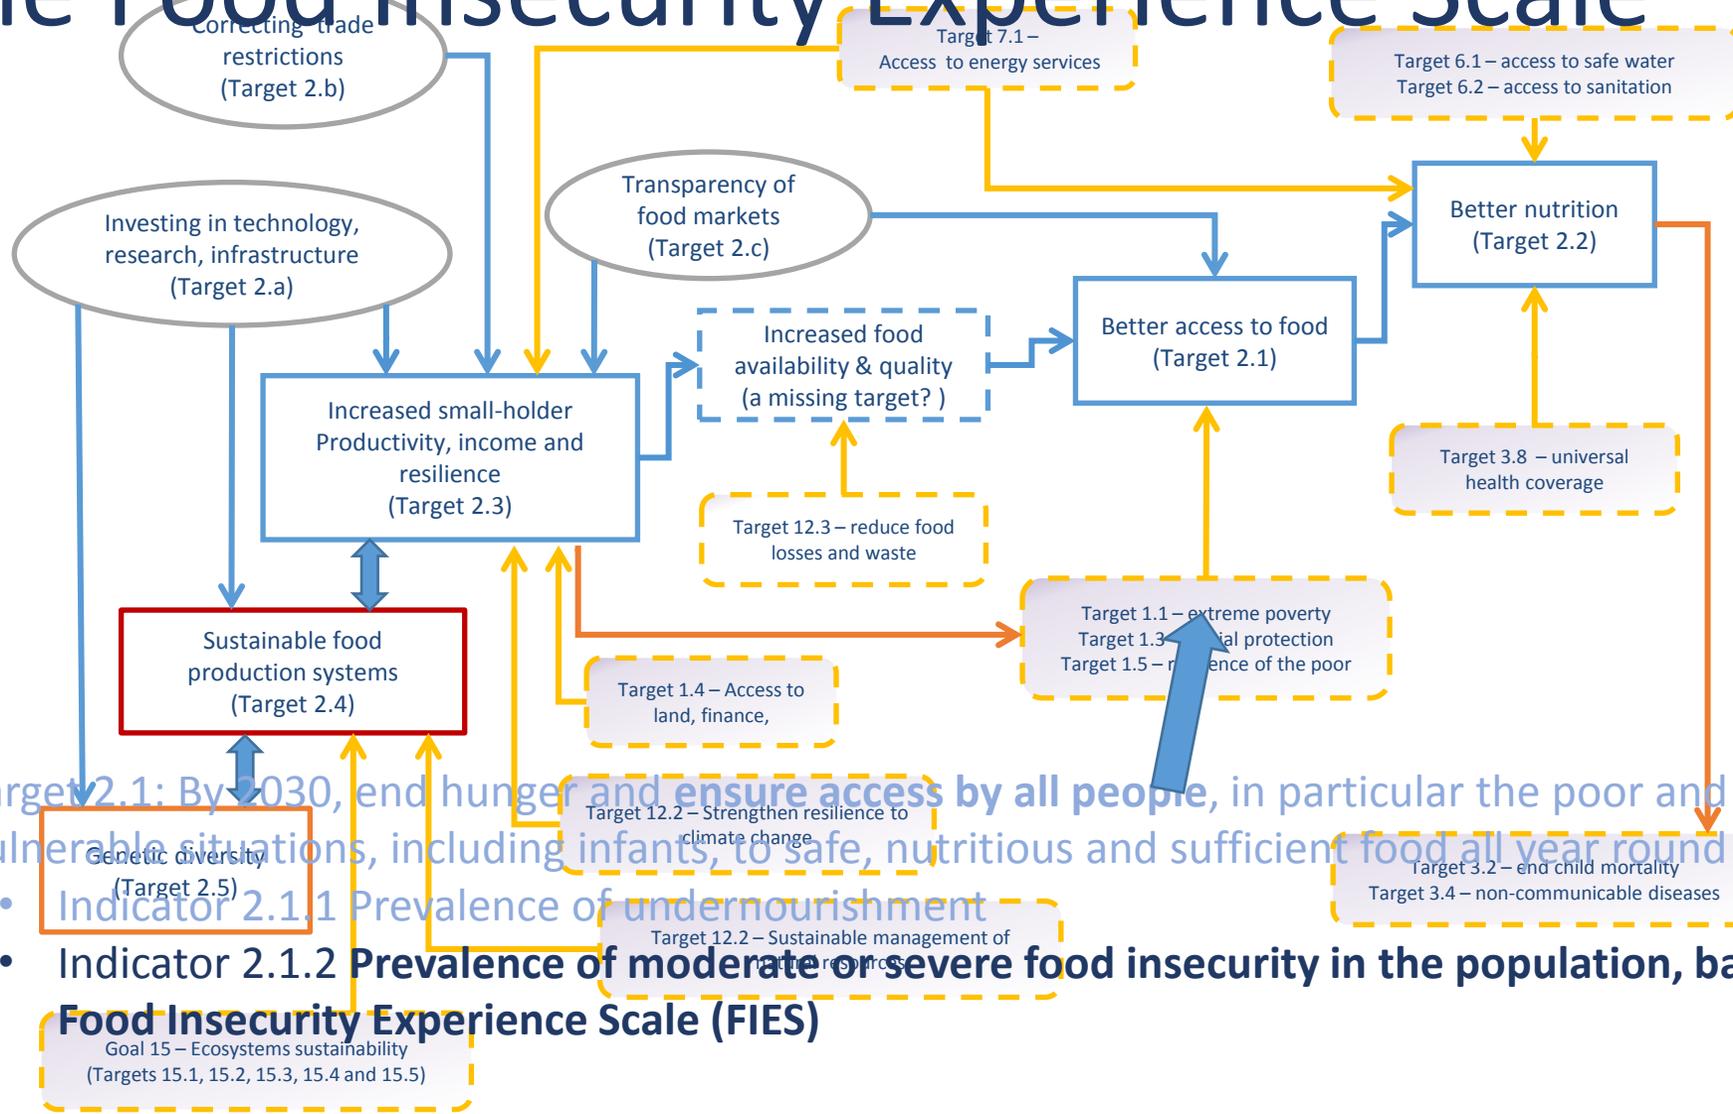

Food Security in the Development Agenda

SDG 2

The Food Insecurity Experience Scale

- Target 2.1: By 2030, end hunger and ensure access by all people, in particular the poor and people in vulnerable situations, including infants, to safe, nutritious and sufficient food all year round
 - Indicator 2.1.1 Prevalence of undernourishment
 - Indicator 2.1.2 Prevalence of moderate or severe food insecurity in the population, based on the Food Insecurity Experience Scale (FIES)
- Goal 15 – Ecosystems sustainability (Targets 15.1, 15.2, 15.3, 15.4 and 15.5)

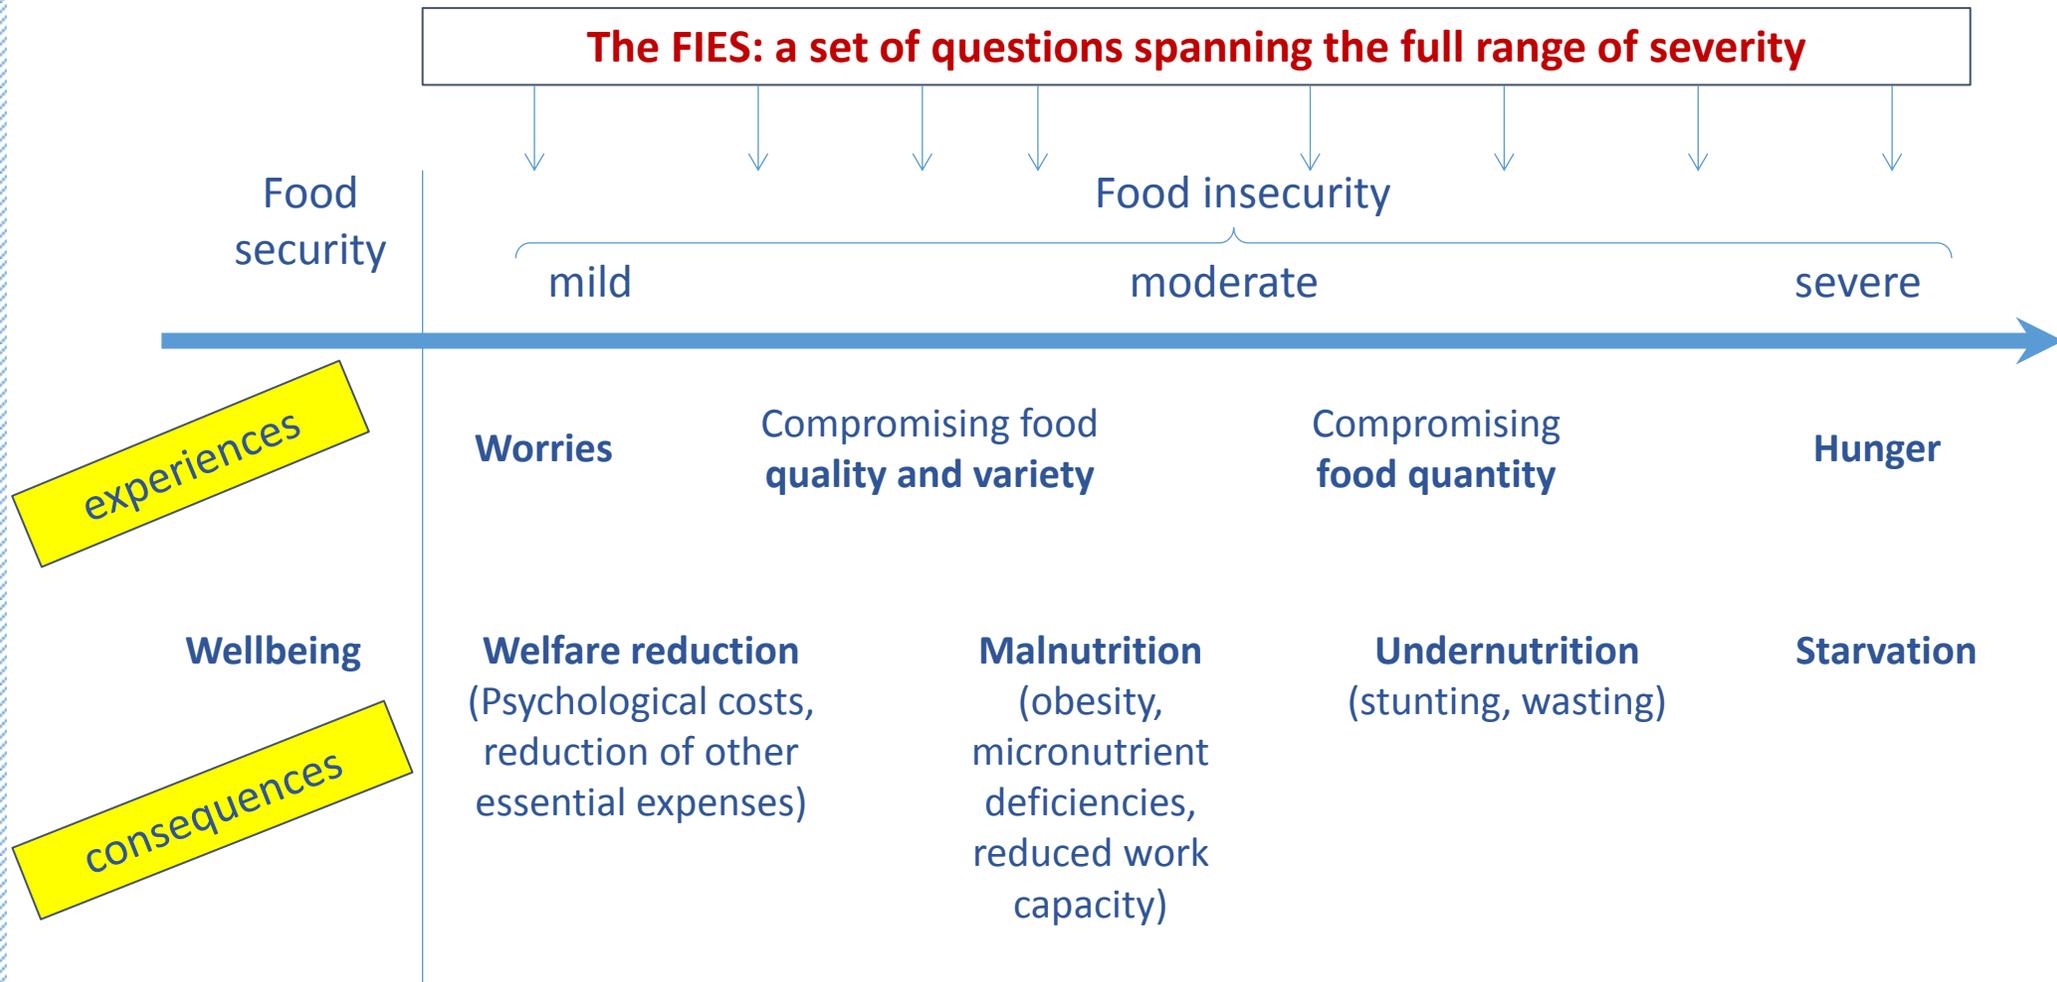

The Food Insecurity Experience Scale

The concept:

1. Food insecurity is seen **from the perspective of the people** who struggle every day to get the food they need
2. It focuses on **access to food**, not on outcomes such as quantity and quality of food intake or nutritional status
3. The severity of the condition of a household or individual is treated as a **“latent” trait** (i.e., it cannot be observed directly, but its magnitude can be inferred from observable facts)
4. Use of advanced **statistical methods** makes it possible to produce proper measures, whose **validity and reliability can be formally assessed**

The Food Insecurity Experience Scale

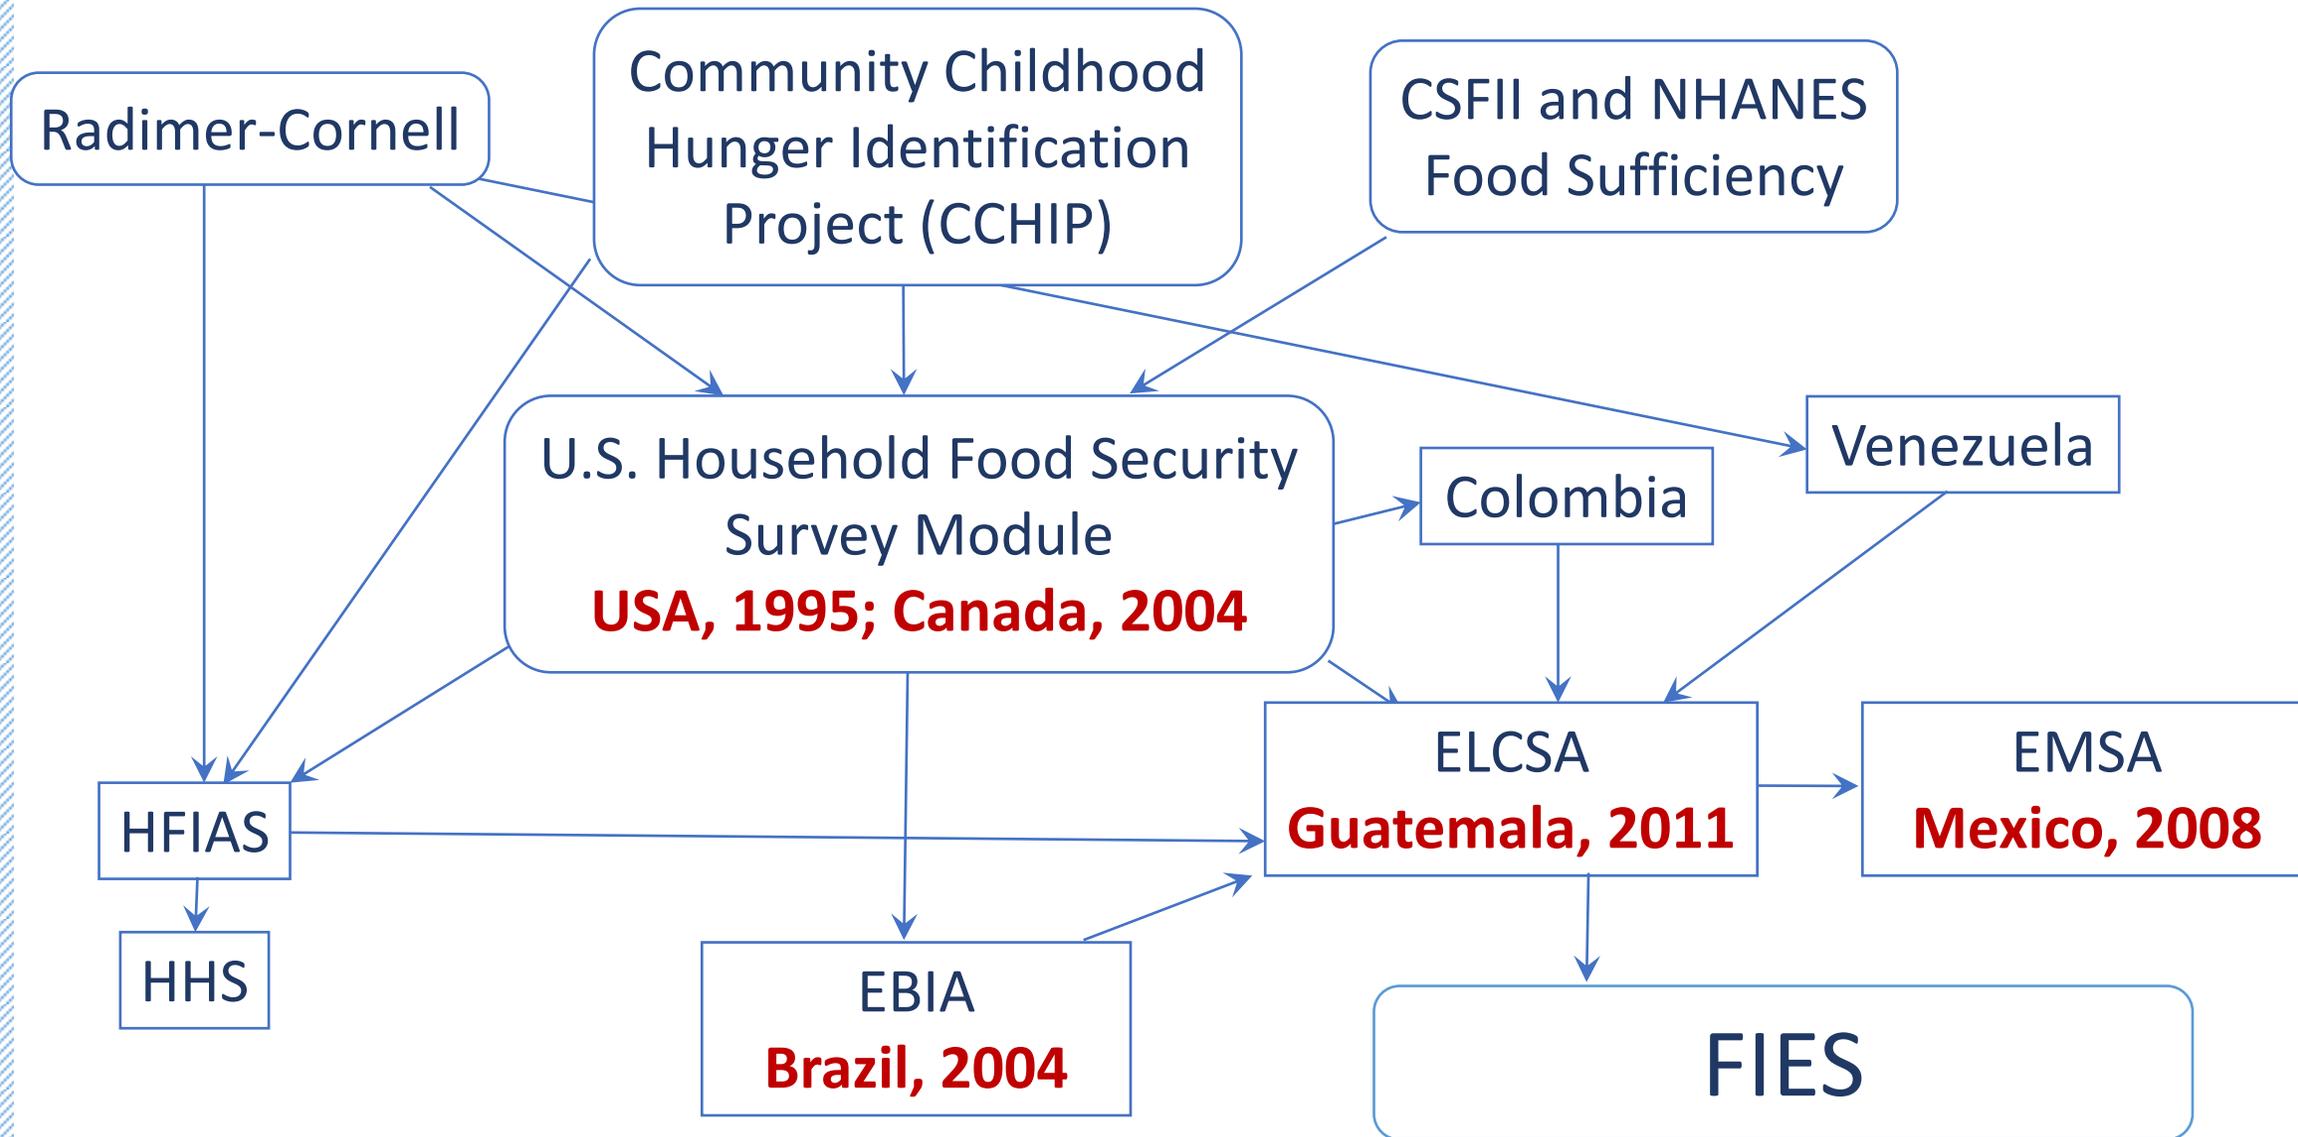

The Food Insecurity Experience Scale

During the last 12 MONTHS, was there a time when:

- 1. You were **worried you would run out of food** because of a lack of money or other resources?*
- 2. You were **unable to eat healthy and nutritious food** because of a lack of money or other resources?*
- 3. You **ate only a few kinds of foods** because of a lack of money or other resources?*
- 4. You **had to skip a meal** because there was not enough money or other resources to get food?*
- 5. You **ate less than you thought you should** because of a lack of money or other resources?*
- 6. Your **household ran out of food** because of a lack of money or other resources?*
- 7. You **were hungry but did not eat** because there was not enough money or other resources for food?*
- 8. You **went without eating for a whole day** because of a lack of money or other resources?*

FIES Genealogy

The innovations from Voices of the Hungry

- **Cross country comparability**
 - The FAO project has established a **Global FIES reference standard**, against which all Experience-based food security scales (EBFSS) can be calibrated
 - Possible **differences in people's perceptions or in food related habits** across different cultures **are taken into consideration** when calibrating the measures, so that they do not affect the measure of severity
- **Possibility to use household or individual frames**
 - Gender disparities can be captured using the individually framed version
- **Possibility to use different reference periods**
 - The FIES does not confound severity with frequency
 - Can be used to analyze **seasonal differences** in the severity of food insecurity

The merits

- **The validity and reliability of the measures can be formally assessed**
 - Statistical tests on the data, to confirm they yield **proper measures** of a single underlying latent trait
 - **Sampling and non-sampling (!)** errors can be computed
- **It is easy to implement**
 - FAO provides FIES questionnaires in **200 different languages**
 - Flexibly adapted, it can be included in **virtually any population survey**.
 - It requires an average of **3 minutes of survey time** to apply
 - Can be **easily programmed in CAPI** applications

The merits

- **It generates disaggregated information**
 - When included in large scale representative surveys, results can be disaggregated at the level of any **population group** for which the survey is representative
- **The information it produces can be used to guide policy and intervention**
 - Can be **quickly** analyzed to generate **real-time results**
 - The food insecurity condition of household and individuals is one of the most effective **predictors of malnutrition**
 - In the US, the prevalence of food insecurity among households has been found to be particularly **sensitive to general macroeconomic conditions** (e.g., economic crises, unemployment rates)

The successes thus far

- Indicators based on the FIES, compiled by FAO at regional and global level, **are already featured in the UN SDG progress report 2016**
 - “More than half of the adult population in Sub Saharan Africa has experienced food insecurity at moderate or severe levels”
 - “Although differences are small Food Insecurity is more prevalent among adult women than among adult men almost everywhere in the world”
- The FIES has already been included in **official population surveys** in **Burkina Faso, Kenya, Pakistan, El Salvador, The Dominican Republic, St. Lucia, The Seychelles**; its inclusion has been announced in **Indonesia** and **Rwanda**, and it is being piloted in several other countries
 - Technical support has been provided for data analysis to Burkina Faso, Pakistan, The Seychelles and St. Lucia.

The successes thus far

- The FIES is included in the indicators framework for **M&E of projects** supported by the **Global Agriculture and Food Security Program (GAFSP)** and by the **German Agency for International Development (GIZ)**
- **Research** is being conducted using FIES data by independent researchers who have been awarded a license to access the full GWP dataset (see <http://www.fao.org/3/a-bl331e.pdf>)
 - Results of their work has already been presented in international meetings (e.g., the 2016 Association for Public Policy Analysis & Management – APPAM - Conference in London) (<https://appam.confex.com/appam/int16/webprogram/Session6578.html>)

The challenges ahead

- **Still limited application worldwide**
 - Although FAO has applied it **since 2014 in more than 150 countries** every year, this has only been through the Gallup World Poll on relatively **small samples**, which are only representative at national level
 - The full potential of the FIES will be expressed when it is included in large-scale population **surveys that also collect data on other determinants and outcomes** of food insecurity
- Advocate for **inclusion of the FIES** in more large scale households surveys
 - Partnerships: World Bank LSMS, WFP VAM, UNICEF India
- Provide **capacity development**, to increase statistical and analytic capacities in the field of food security

The challenges

- **Communication**

- Over the past 20 years, there has been a proliferation of proposed household “food security” indicators, often without sufficient attention given to the analytic soundness of the methods proposed.
 - There is still a lack of sufficient widespread statistical literacy to appreciate the advantages of the FIES.
- Give **more visibility to results** on the prevalence of food insecurity measured with the FIES, while making sure they **are properly interpreted** and the difference with the PoU or Poverty rates is understood
 - See a set of Frequently Asked Questions on the Voices of the Hungry webpage (<http://www.fao.org/in-action/voices-of-the-hungry/faq/en/>)
 - Help governments **make use of the information** generated by the FIES **from an inter-sectoral perspective**, to address causes and consequences of food insecurity
